# This is Sveba Connect

Use with your preferred device - Sveba Connect runs with them all.

## USER-FRIENDLY

Easy to learn, easy to use.

## VALUABLE INFORMATION

View oven statistics, logs, important notifications and more!

## GAIN CONTROL

Get information on the use, consumption and efficiency of connected ovens.

## SAVE TIME & MONEY

Save and share recipes and update the software with one click. Use aggregate data to increase efficiency and save money.

WELCOME TO THE FUTURE OF BAKING

# A recipe for successful baking.

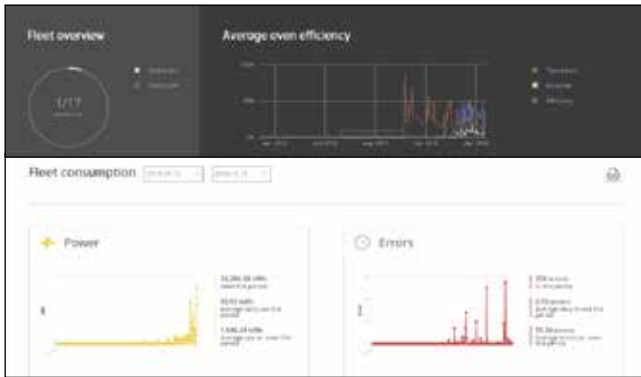

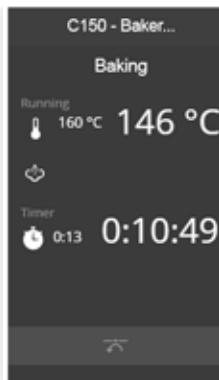

Successful baking is more than just being able to bake good bread.

It's about making the road from raw dough to the aroma of baked bread as simple, efficient and profitable as possible. This is where Sveba Connect comes in. It is a cloud-based service that gives the user a truly unique overview and control of their ovens – which can be managed and monitored wherever the user is, any time and from any platform. And in real time!

With Sveba Connect, it is easy to upload, distribute and share recipes – both those that

deal with the oven settings, and also baking recipes – to all connected ovens and to other users. With the cloud service, it's simple to continuously update software easily, securely and simultaneously – with a single click! The system also collects operational information and data from the ovens, making it easier to get an overview of energy consumption, capacity and servicing.

Welcome to Sveba Connect – the recipe of the future for both profitable baking and tasty bread!

“With a few clicks, the recipes from Sveba Connect are distributed to all connected ovens.”

Sveba Dahlen’s cloud service Sveba Connect is a powerful tool that provides useful information on connected ovens, their consumption, usage and more. Sveba Connect also offers centralized software updates and smart recipe management.

The Recipe Hub offers a whole new way of working with recipes. Collect together all recipes in one place, send them to all ovens with the right oven settings ready to go. Share and send between the ovens, with just a few clicks so all ovens get the same recipe.

- Home screen that can be customized by interest: Live status, oven overview or consumption.
- Live overview of all the company's connected ovens. Displays the current oven mode/status.
- Create, edit and share oven recipes with instructions on oven settings and times. Send both to and from an oven.
- View and manage connected ovens. Current status, serial number, location and software version. Access the oven's individual data: Activity log, service log, run time statistics, error statistics, consumption, and recipes.
- Overview of all connected ovens and their consumption, efficiency, run time, baking time, error messages and more.
- Create, download and share recipes with other users around the world. A fantastic source of inspiration!
- View connected ovens, current software and any available updates. Update the software with a single click!

“View the combined efficiency and activity of all connected ovens.”

# Sveba Connect

Sveba Connect is part of Middleby Connect, which means that machines from Middleby Corporation can also be connected to the cloud service.
